(54) TELEVISION RECEPTION SYSTEM

(57) Abstract:

PROBLEM TO BE SOLVED: To monitor the broadcasting contents of television in a nursery through parents so as not to exert any adverse influence upon the education of child by composing a system of a master television and a slave television under the control of master television and projecting images broadcasted on the slave television at one part of the display of master television.

SOLUTION: A master television control means 16 of master television 10 installed in the room of protector receives a control signal from a receiving means 15, controls the power source on/off and channel selection or the like of master television 10 and outputs control signals such as power source on/off signal and channel select signal or the like to slave television 20A and 20B in respective nurserys. Then, a channel receiving means 17 outputs a video signal while selecting any

channel according to this channel select signal. In this case, a video composing means 18 outputs a composed image signal by composing video signals from the channel receiving means 17 and the slave televisions 20A and 20B, and the images on the slave televisions 20A and 20B are projected at the corner part of display 19.
